5 DEAD Crypto Coins You Must Sell Today...

By:

NetPicks.com

Sell These 5 Crypto Coins NOW!

So, I was doing some reading on crypto...

As you know I'm always researching different investments.

My passion leans towards Crypto... mostly because of its profit potential.

So, of course I read everything I can get my hands on, in the mainstream media. I've found knowing what the big guys talk about can sometimes be very helpful.

They may not be the FIRST to a story - but they have a way of taking it mainstream.

That's why, when this article crossed my desk, I sat up and took notice!

In the "*April/May 2024 Forbes Magazine*"... The very last article was all about Zombie Crypto Coins.

Now, this isn't the first we've heard of Zombie coins... as a matter of fact there's hundreds of them out there - in my opinion. Coins that exist but have no real value or use.

But, this is the first time I've seen a really big financial publisher go deep on this topic.

I'm not going to rehash the whole article for you here, what you need to know is simple.

A lot of big coins were launched "back in the day" creating massive warehouses of value. But because of technology advancements, crypto forks, or other reasons... These Coins have been left in the dust.

What's crazy is most people have forgotten about them, or simply ignored them... yet they're still kickin around. The technology is old or has been replaced... or because of a fork in the blockchain, most people focus on the other side.

Regardless, what sets these zombie coins apart is their trading volumes. Nobody is really using them, but they still see trading activity. Lots of it too.

They're not alive - and they're not dead.

These old coins remind me of Tech penny stocks. Old tech companies that had the potential to remake the world - 20 years ago - but never did.

Most were shuttered or sold off... a few remain, but the bones have been picked over.

Because Crypto Coins don't have true shareholders or in some cases even management... they just keep existing with no formal way to dismantle them.

How do they end?

Nobody knows for sure... I think trading will dry up and the crypto miners supporting the block chain will eventually stop processing...

Maybe we'll never know!

So, now that you know WHY these DEAD Crypto Coins exist... Why the warning?

It's because I discovered some people I knew actually owned some of these coins. And look, if you're into speculating - you do you - buy and sell what you want.

But if you're one of these buy and hold types of investors, pay attention. You might hold some of these coins - because they forked off of other coins to create their own unique CryptoCoin.

That means you might own them and not even know it!

Look, I'm just trying to help. You might be sitting on dead money and you don't know it. If I was in the same situation, I'd want someone to at least tell me.

So here's your warning.

What follows is 5 well known coins - that I think are DEAD MONEY... and apparently Forbes' agrees!

If you own them, I'd consider selling them ASAP - and put whatever cash you have to better use.

Here's the List of Dead Money CryptoCoins:

1. XRP (XRP)
2. BitCoin Cash (BCH)
3. LiteCoin (LTC)
4. Ethereum Classic (ETC)
5. BitcoinSV (BSV)

For sure, pick up the Forbes article and read more about it... I find it fascinating.

FOR EDUCATIONAL AND INFORMATION PURPOSES ONLY; NOT INVESTMENT ADVICE.

NetPicks Services are offered for educational and informational purposes only and should NOT be construed as a securities-related offer or solicitation or be relied upon as personalized investment advice. We are not financial advisors and cannot give personalized advice. There is a risk of loss in all trading, and you may lose some or all of your original investment. Results presented are not typical.

Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any trading account will or is likely to achieve profits or losses similar to those shown, in fact, there are frequently sharp differences between hypothetical trading performance results and the actual results subsequently achieved by any particular trading program.

One of the limitations of hypothetical trading performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. For example, the ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical forex trading performance results, and all of which can adversely affect actual forex trading results.

Past results of NetPicks are not indicative of future performance.

The monthly and composite annual results should be viewed as hypothetical.

In reality, the results do not represent the track record of the methodology originator or subscribers. This also means there is no guarantee that one applying these

[NetPicks.com](https://www.netpicks.com)

methodologies would have the same results as posted. Since trading successfully depends on many elements including but not limited to a trading methodology and trader psychology, our website does not make any representation whatsoever that the above mentioned trading systems might be or is suitable or profitable for you.

In addition, it's important to understand and accept that there can be data outages and server failures. The brokers system might not be functional, the auto trading servers might have technical difficulties and there may be times where communication between accounts, the broker and the auto-trade program are not functioning properly. This can lead to greater risk. Markets also do not always guarantee exact fills. Periods of fast markets can cause greater degrees of slippage and less than ideal fills. There can be no guarantee that your account will always be able to enter and exit the program's ideal entry or exit point.

They carry a high degree of risk.
